

Legacy DDC Controls Spotlight Series:

Novar NCH-1000 & NSD Lighting Control Module

Description

The **Novar NCH-1000** and **NSD** are digital control modules originally manufactured by **Novar Controls Corporation**. Introduced to the market as a solution to integrate facility lighting with the Novar Logic One building automation system, these modules were specifically designed to communicate with **Cutler Hammer** and **Square D** breaker panels. This allowed for advanced communication to the building systems executive controllers such as the Savvy and EP/2.

The Novar NCH-1000 and NSD have been installed in thousands of retail facilities in the U.S., Canada, and abroad. Both the hardware and software for these modules have been updated over the years to accommodate evolving electrical specifications, one example being the transition away from 3-wire lighting breaker panels. To accommodate the newer 4-wire breaker panels, a latest version of 2.6 or higher was implemented.

Longevity & Maintenance

The longevity of the NCH and NSD can be sustained with solid preventative maintenance plans, most importantly those involving electrical surge protection practices. Because the NCH and NSD are susceptible to electrical surges from lightning storms or other sources, proper ground rods and other known practices are keys in preventing circuit board damage and increasing the life-span of your existing control modules.

Continued Parts & Repair Support

[ASSET Technologies](#) offers **continued repair, warranty, and the latest version updates for Novar NCH-1000 and NSD control modules**. As the official and only authorized repair facility for Honeywell Novar, we are capable of resolving hardware issues to ensure your legacy building automation components are fully protected.

If you still use Novar Logic One systems and need parts & repair support for NCH-1000 and NSD, please contact us directly:
