

Legacy DDC Controls Spotlight Series:

Novar Savvy Executive Controller

Description

The **Novar Savvy** is a legacy executive controller from the Novar Logic One energy management system. Introduced to the building controls market over 15 years ago, this DDC controls device has been installed in thousands of facilities, much to the success of [Novar Honeywell](#). Although a legacy controller, the Novar Savvy still remains a viable and dependable product used by countless retailers, schools, and other facilities across the U.S., Canada, and abroad.

The Novar Savvy is designed for single building control and is configurable to meet a facility's control needs with regards the size and complexity of the buildings energy management system. It can control up to 31 modules per Savvy, and communicate with multiple Savvys per network. Although not as advanced as its successor, the Novar Opus, the Savvy has proven to be a solid investment for building end-users and continues to prove its worth in today's building automation market.

Continued Product Support

In 2008, [ASSET Technologies](#) introduced a program to continue repairs and warranty for faulty Novar Logic One devices, including the Novar Savvy. This allowed customers to enjoy continued support for Savvy's while still maintaining their original Novar Logic One system. In 2013, in their dedication to providing continued quality support for customers, Novar Honeywell partnered with ASSET Technologies to further promote the **Novar Product Repair Program**.

If you still use Novar Logic One in facilities and need repair support for faulty Savvy devices, please contact us directly:
